

PERGO®

Pergo quickheat

The smart, new way to enjoy underfloor heating: Install it yourself
– without an electrician. Wireless thermostat for maximum comfort!

New
one-of-a-kind
solution!

THE CLICK & PLUG SYSTEM

Underfloor heating that's as easy as child's play

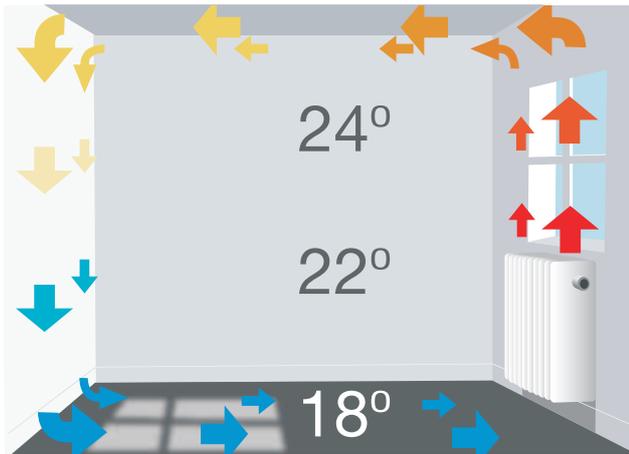

Now you can enjoy the luxurious comfort of underfloor heating at home or in your summer cottage, without it costing you a fortune. With Pergo quickheat you can easily do the job yourself – without an electrician.

Begin by forgetting everything you've ever heard about how time-consuming and expensive it is to install comfortable heating beneath your feet. Pergo quickheat works with all types of floating floor coverings such as wood and laminate.

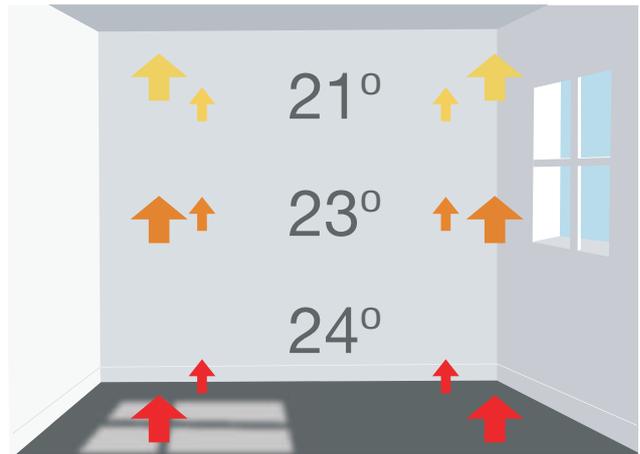

Once you've removed the old flooring and exposed the subfloor, simply roll out the Pergo quickheat mats with their built-in heat cables instead of installing an underlay. Then just click them together and install your new floor on top.

That's all there is to it.

Heating with radiators

Heating with Pergo quickheat, radiant floor heating

The most comfortable warmth saves energy!

» Pergo quickheat is designed to bring added comfort through floor heating.

» It is a modular underfloor heating system consisting of two layers of specially designed foam plastic with a third middle layer containing a reflective aluminium foil surface and the heating cables.

» Thanks to the insulation and heat reflective surface in the bottom of the mats all heat is directed upwards.

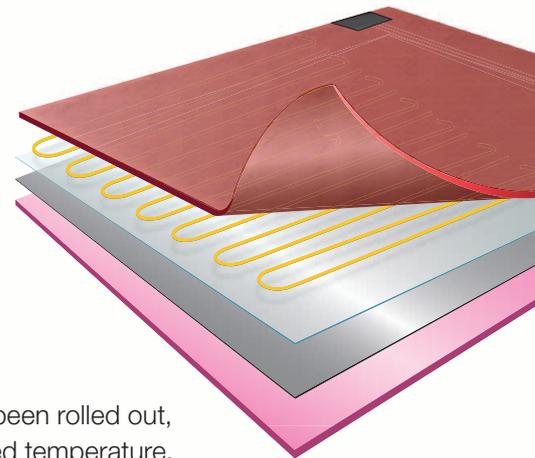

» This means fast heat adjustment – a warm floor in only 30 minutes.

» It also means energy savings – you can normally lower the average room temperature 2–3 degrees compared to heating with radiators.

» You can easily fine-tune the temperature of each room. Once the mats have been rolled out, simply connect the safety box (CD) and set the wireless thermostat to the desired temperature.

» The flexible timer allows you to have separate floor heating setting for weekdays and weekends. Four individual time zones support your daily mode (morning, day, evening and night) and each period can be set with a unique temperature.

» And remember, with a maximum effect of 55 W/m² Pergo quickheat is not intended to replace your primary heating system, but to provide comfortable, warm floors throughout the entire room.

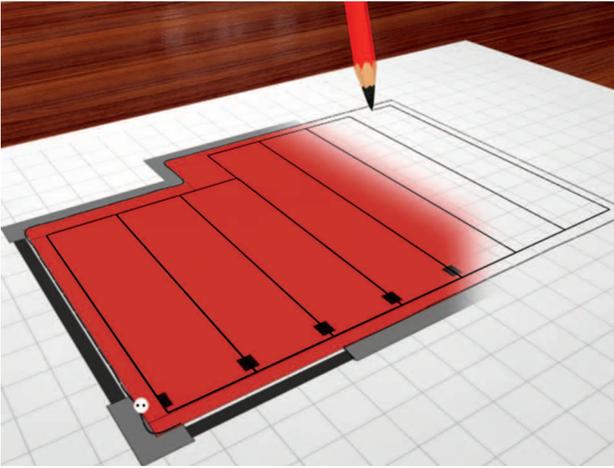

Underfloor heating in five easy steps

Pergo quickheat is certified for do-it-yourself installation to guarantee simplicity.

When all the mats have been placed on the subfloor and the electrical components connected, just insert the plug into a wall socket. Pergo quickheat comes with a built-in safety circuit which automatically disconnects the power in the event of a malfunction.

Pergo quickheat complies with EN/IEC 60335-2-106, the new standard for removable floors, which reassures homeowners that the product is safe to use.

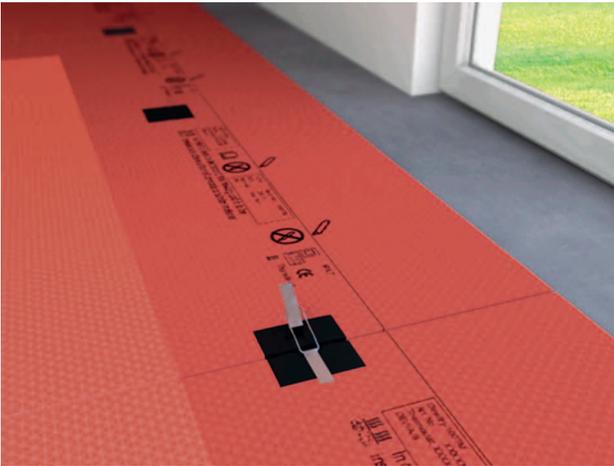

1 Plan the installation

2 Roll the mats out easily

3 Connect the mats to each other

4 Mount the RCD electrical safety box

5 Mount the thermostat anywhere in the room (130 – 160 cm above the floor)

Find out what you need at **pergo.com**

We've made it easy for you to plan your Pergo quickheat project. Visit pergo.com for more information and for determining exactly what you will need for a successful installation.

You can simply enter your measurements directly into our on-line calculator to establish exactly how many mats you need.

Good luck with your new underfloor heating for a more comfortable floor!
